TECHNICAL SKILLS

Security Monitoring & SOC

SIEM (Wazuh, KUMA), log analysis (Sysmon, Windows Event Logs, Syslog), IOC identification, security alert configuration

Security & Automation

pfSense, iptables, Suricata, FreeRADIUS, n8n, Docker, Docker Compose

Systems & Networking

Windows Server, Active Directory, DNS, DHCP, GPO, basic Linux administration, OSI model, TCP/IP

Programming & Databases

C#, Java, JavaScript, Python, Supabase

EDUCATION

HUFLIT

Cybersecurity, Faculty of Information Technology

Sep 2023 - Expected Mar 2027

Ho Chi Minh City

LANGUAGES

English

Intermediate proficiency

Comfortable reading technical documentation.

PROFESSIONAL SUMMARY

Cybersecurity student pursuing a career in security operations, with hands-on experience configuring network and monitoring infrastructure, analyzing security logs, and automating incident response workflows.

Experienced with Kaspersky KUMA, Wazuh, Suricata, pfSense, and n8n. Seeking a SOC Intern or Security Analyst role to strengthen detection engineering skills and contribute to enterprise security operations.

WORK EXPERIENCE

JAN 2026 - MAY 2026 • HO CHI MINH CITY

SOC INTERN

Confidential Technology Company

- Deployed and configured Kaspersky KUMA SIEM to monitor Apache and Nginx web server logs; developed correlation rules to detect DDoS activity, web scanning, and website defacement.
- Built attack-scenario proofs of concept and corresponding monitoring use cases to validate SOC infrastructure and detection coverage.
- Authored incident response playbooks and swimlane workflows aligned with NIST SP 800-61 Rev. 2.

Kaspersky KUMA

SELECTED PROJECTS

PROJECT 01 • MAR 2026 - MAY 2026

SDN / MONITORING

SDN Centralized Log Collection System

- Built a software-defined networking lab with Mininet and the Ryu Controller.
- Developed a centralized log ingestion pipeline for virtual switches and routers, providing consistent visibility across the SDN environment.
- Outcome:** Improved traffic monitoring and enabled earlier detection of anomalous behavior across the SDN infrastructure.

Ryu Controller

Centralized Logging

SDN

PROJECT 02 • OCT 2025 - NOV 2025

SOC / SOAR

Enterprise SOC Monitoring & SOAR System

- Segmented the network with VLANs on pfSense and implemented WPA2-Enterprise authentication with FreeRADIUS.
- Deployed Suricata in inline mode to detect and automatically block DDoS activity and Nmap scans.
- Created Wazuh SIEM rules for centralized monitoring and detection of rogue DHCP and SSH brute-force activity.
- Automated incident response with n8n, including risk scoring, Telegram alerts, and malicious IP blocking on the firewall.
- Developed a real-time security monitoring dashboard with ReactJS and Supabase.
- Outcome:** Delivered a closed-loop SOC prototype that detected and blocked simulated attacks within seconds.
